01 Brand Overview

Mission

To make every organization's financial data decision-ready, wherever work happens.

Positioning

Cube AI is the Agentic Finance Layer built for the AI era. We make financial data decision-ready across every FP&A tool and workflow, unifying data from every source system into a centralized command center for high-performance planning, reporting, and analysis.

Tagline

Cube AI. The Agentic Finance Layer.

Decision-ready data, everywhere you work.

Value Pillars

Financial Integrity

Every number across every report, every team, and every tool is consistent, traceable to the transaction, and accurate.

Strategic Agility

Autonomous FP&Agents eliminate the manual reconciliation cycle, freeing FP&A to focus on high-value analysis and instant what-if answers.

AI Trustworthiness

Trace to Truth architecture makes AI-driven insights safe and reliable for high-stakes financial decisions. Every insight maps back to the GL.

Founded by Christina Ross

A three-time CFO who built the platform she wished she'd had. One that eliminates consultant-heavy implementations and puts finance teams in the driver's seat from day one.

02 Logo System

Primary Logo — Gradient

The gradient logo is the preferred version. Use on dark backgrounds (Navy, Darkest, New Blue). The cube icon uses the green-to-white gradient representing the data journey.

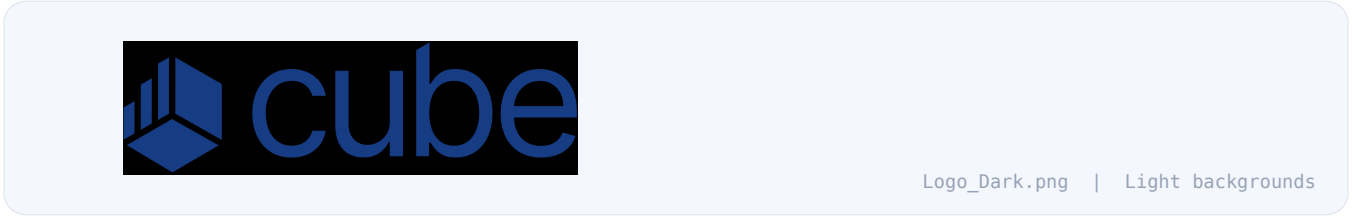

Reversed Logo — White

Use the all-white version when the gradient cannot be reproduced (single-color print, embroidery, low-resolution) or on photographic backgrounds.

Standard Logo — Dark

Use on light backgrounds (Cube White, Warm White, Gray 200, white). Default for documents, web, and print on light surfaces.

Clear Space & Minimum Size

Maintain clear space equal to the height of the "c" in "cube" on all sides. Minimum width: 80px digital, 20mm print. Never stretch, rotate, recolor, add effects, or place on busy or low-contrast backgrounds.

03 Color System

Core — Foundation

The deep blues anchor the brand. Use for dark-mode surfaces, hero sections, and authority backgrounds.

Darkest
#0A1229

Navy
#0A1A39

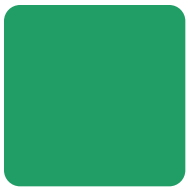

New Blue
#12264D

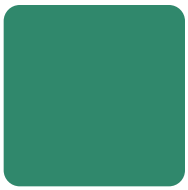

Blue OG
#173D82

Primary — Intelligence Spectrum

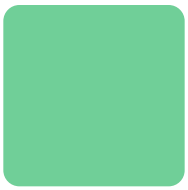

Greens communicate growth, accuracy, and data health. The spectrum follows the data journey from raw to refined.

Green OG
#219E66

New Green
#30886C

Light Green
#70CF98

Mint
#EBFFE8

Accent — Warmth + Energy

Warm tones signal attention and caution. Burnt Amber is the primary warning color for product UI. Use sparingly and only for functional alerts, never as brand accent.

Amber Mist
#FEF3E0

Burnt Amber
#D4802A

Secondary — Signal + Expression

Deep Purple is the AI and intelligence accent. It lives at the same depth and saturation as the blues and greens. Pink for soft expression and secondary tints.

Deep Purple
#5547A5

Pink
#FFE6E5

Neutrals — Surface + Type

Neutrals form the backbone of layouts, backgrounds, and text. Ranges from near-white surfaces to deep charcoal for body copy.

Warm White	Cube White	Gray 200	Gray 300	Gray 400	Gray 500	Gray 600	Gray 800
#FAFFF5	#F4F7FD	#F2F5F9	#E3E8EF	#CDD5DF	#97A3B6	#677489	#353F4F

Design Principles

Light surfaces first

White, Cube White, and Gray 200 are the default canvas. Saturated color is the exception, not the rule. The brand earns its visual authority through restraint and whitespace, not density.

Color as accent, never as fill

Brand colors (Green OG, Deep Purple, Blue OG) appear as thin borders, icon tints, subtle gradient washes, and small highlights on light cards. Never as large solid background blocks.

Never combine saturated colors side-by-side

When multiple brand colors appear together (e.g. agent cards, feature grids), use 5-10% tinted backgrounds on white cards with color reserved for a thin top-edge or icon. Full-saturation blocks competing for attention looks heavy and undermines the premium feel.

Temperature is meaning

Cool tones (navy, teal) represent raw data. Warm tones (amber, coral) represent decisions. This is functional, not decorative. Gradients follow the data journey directionally.

Purple is reserved for AI

Deep Purple (#5547A5) signals AI and intelligence moments only: processing, connection, insight. Tuned to the same depth and saturation as the blues and greens for palette harmony.

Usage Mapping Quick Reference

Default surface	White or Cube White (#F4F7FD) — always the starting point
Card backgrounds	White with thin colored top-border or subtle tinted wash
Positive / success	Light Green border or Mint (#EBFFE8) tinted background
Warning / attention	Amber Mist (#FEF3E0) tinted background, Burnt Amber border
AI / intelligence	Deep Purple icon or thin accent only — never as fill
Dark mode	Darkest (#0A1229) — reserved for hero sections and marketing
Headings	New Blue (#12264D)
Body text	Gray 800 (#353F4F)
Secondary text	Gray 600 (#677489)
Captions / labels	Gray 500 (#97A3B6)

Gradients — Brand Signatures

Gradients are core to the Cube AI visual identity. They represent the data journey: cool tones (raw data) transitioning to warmer tones (refined insight). Use them generously across hero sections, CTA blocks, card backgrounds, marketing materials, and section dividers. Every gradient flows directionally and carries meaning.

Intelligence Spectrum (primary brand gradient)

Brand CTA

Cool Depth

AI Signal

Growth

Midnight AI

Full Journey

`Navy #0A1A39 → New Green #30886C → Light Green #70CF98`

End-to-end transformation stories. Case studies, before/after narratives, data flow diagrams.

Subtle Wash Gradients — Light Backgrounds

For light-background sections where a flat white feels too stark, use these soft gradient washes. They add depth without competing with

Soft Mint Wash

Soft Purple Wash

Surface Shift

`Gray 200 #F2F5F9 → Cube White #F4F7FD`

Default section transitions. Prevents hard cuts between white and gray sections.

Accent Edge Pairs — Panel Borders

Thin gradient borders on cards, panels, and section dividers. Apply along the top or left edge at 2-4px. Use generously on cards, feature grids, stat blocks, and agent panels.

Navy Light Green	Default panel accent, data cards
Navy Deep Purple	AI panels, agent cards, CTA borders
New Blue Light Green	Reports, dashboards, stat cards
Blue OG Deep Purple	Premium features, intelligence moments
Deep Purple Light Green	AI-to-outcome narrative, transformation stories
New Green Light Green	Success cards, growth metrics, positive states

Gradient Usage Rules

- Use gradients generously. They are a core brand element, not a rare accent. Every major marketing section should include one.
- Gradients always flow left to right or top to bottom. Never radial, diagonal, or randomly angled.
- Cool-to-warm direction represents the data journey. Reversing direction reverses meaning — avoid it.
- The Intelligence Spectrum is the default brand gradient. When in doubt, use it.
- The Brand CTA gradient (purple to navy) is the standard for conversion-focused sections with white text overlay.
- Subtle wash gradients replace flat white backgrounds on content-heavy pages. They add depth without distraction.
- Edge pairs are 2-4px thick. Use them on every card grid and feature panel — they are a signature brand detail.
- On dark gradient backgrounds, text should always be white or Light Green. Never gray.
- Gradients may be used as overlay washes on dark backgrounds at 10-30% opacity for additional depth.
- Never use gradients that include colors outside the defined system. No arbitrary color stops.

04 Typography

Primary Typeface — DM Sans

DM Sans is used for all headings, brand display, and marketing. A geometric sans-serif with squared terminals and controlled counters, it stays sharp and authoritative at heavy weights where rounder alternatives lose precision. The ExtraBold weight commands hero headlines; Medium handles subheadings cleanly. Available on Google Fonts and installable across all platforms.

DM Sans

ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklmnopqrstuvwxyz 0123456789

Weights: Regular (400) Medium (500) Semibold (600) Bold (700) ExtraBold (800)

`Use: Headings, brand, display, marketing headlines`

Secondary Typeface — Source Sans 3

Source Sans 3 handles body copy, UI elements, and product text. Created by Adobe and widely pre-installed via Adobe products, it provides excellent cross-platform coverage without sacrificing quality. Warm humanist details at body sizes create natural contrast with DM Sans's geometric precision, mirroring the brand's cool-to-warm temperature principle. Available on Google Fonts.

Source Sans 3

ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklmnopqrstuvwxyz 0123456789

Weights: Light (300) Regular (400) Medium (500) Semibold (600) Bold (700)

`Use: Body copy, UI, product interfaces, data-dense screens`

Monospace — JetBrains Mono

JetBrains Mono is purpose-built for technical reading. Clear zero/O and one/l distinction, tasteful ligatures, and consistent character width make it ideal for financial figures, GL codes, and data labels. Fallback: Fira Code.

JetBrains Mono

`$1,245,892.00  GL-4200  Q2-2026  #0A1229  0Oo1lI`

`Use: Data labels, hex codes, financial figures, GL references`

Type Scale

Display	DM Sans ExtraBold | 36–48px
H1	DM Sans Bold | 28–32px
H2	DM Sans Medium | 22–24px
H3	DM Sans Medium | 18–20px
Body	Source Sans 3 Reg | 14–16px
Caption	Source Sans 3 Reg | 12px
`Data Label`	JetBrains Mono | 11–12px

Cross-Platform Fallback Chain

CONTEXT	HEADINGS	BODY	MONO
Web, product, marketing	DM Sans	Source Sans 3	JetBrains Mono
Google Workspace	DM Sans	Source Sans 3	JetBrains Mono

05 Voice & Tone

Cube AI's voice is confident, technical, and direct. We speak like a seasoned CFO who also happens to be fluent in AI. Because that's exactly who built us.

Confident

We know what we built. No hedging. No "helps you" or "enables teams to." Cube AI does the thing. Lead with outcomes, not possibilities.

Grounded

Every claim ties back to a real capability or a real customer outcome. No vaporware, no hype. Specificity is the foundation of trust.

Practitioner-First

We speak the language of finance. Close cycles, variance analysis, board decks, GL reconciliation. Our audience knows the craft; our voice reflects that expertise.

Provocative (when appropriate)

We say what others won't. Chatbots are not enough. Most "AI for finance" is a checkbox. We challenge the status quo with substance behind it.

Data-Readiness Framing by Audience

CFOs & CEOs	"Decision-ready"	Focus on certainty, risk mitigation, and high-stakes confidence.
FP&A Practitioners	"Analysis-ready"	Focus on speed, accuracy, and tool flexibility in daily workflows.
IT & Data Leaders	"AI-ready"	Focus on governance, security, and stack interoperability.

Signature Phrases

- "AI can be 80% right. In finance, that's 100% wrong."
- "We don't compete with AI. We make it trustworthy."
- "Trace to Truth." Every number maps to the transaction.
- "The layer, not another tool."
- "From Books to Boardroom in 30 Minutes."
- "Your spreadsheets stay. Everything underneath gets smarter."
- "Decision-ready data at every AI endpoint."

06 Language Rules

Always Say / Never Say

ALWAYS SAY	NEVER SAY
Cube AI	Cube Software
usecube.ai	cubesoftware.com
The Agentic Finance Layer	The Intelligent Finance Layer
Agentic Finance Layer (as category)	FP&A tool / FP&A software
Patented bi-directional connectivity	Patent-pending
FP&Agents	AI chatbot / AI assistant
Finance-grade AI	AI-powered (generic)
Thousands of finance professionals	500+ finance teams / 500+ customers
The Business Partner (agent)	The Strategist
Trace to Truth	Black box / best guess

Writing Principles

- Frame all content around the audience's perspective and what matters to them.
- Never default to generic business language. Every sentence should feel specific to Cube AI.
- Avoid common AI-writing patterns: "it's not X, it's Y" constructions, excessive em dashes, filler.
- Never use dismissive language for personas. No "bean counters," "data plumbers," or "data janitors."
- Maintain the same tone and voice regardless of content type: email, social post, proposal, or memo.
- Never pad content with filler phrases or hollow language.

FP&Agent Suite — Official Names

The Business Partner	Presentation layer, board decks, investor narratives, cross-functional collaboration.
The Planner	Planning cycle, budgets, forecasts, rolling plans, variance tracking.
The Analyst	Ad hoc analysis, trend detection, anomaly flagging, report generation.
The Data Manager	Data layer governance, integrations, reconciliation, data quality.

07 Photography & Imagery

Visual Philosophy

Cube AI imagery reflects the brand's core principle: temperature is meaning. Visuals communicate the journey from raw data (cool, structured, precise) to strategic insight (warm, human, decisive).

Photography Direction

Subject matter

Finance leaders in authentic work contexts: boardrooms, collaborative sessions, focused desk work. Show real tools. Avoid generic stock office imagery.

Lighting

Clean, natural lighting with cool-to-warm temperature shifts. Prefer side lighting that creates depth without drama. Avoid harsh fluorescent looks.

Color treatment

Post-process to align with the brand palette. Pull shadows toward Navy/New Blue. Let highlights lean warm (Amber Mist). Desaturate competing colors.

Composition

Clear focal points with generous negative space for text overlay. Rule of thirds. Prefer eye-level or slightly elevated angles that convey partnership.

People

Diverse, senior-presenting professionals. Confidence and focus, not stress. Subjects should look like decision-makers. No forced smiles or contrived celebrations.

Illustration & Data Visualization

Style

Clean, airy layouts with generous whitespace. Cards and panels sit on light surfaces with subtle shadows or thin colored borders. The glass-panel aesthetic uses layered transparency, not heavy dark blocks.

Data viz

Use a single primary color per chart (typically Green OG or New Blue). Deep Purple for AI-generated data points. Avoid rainbow multi-color charts. Tinted backgrounds (Mint, Amber Mist, Pink) for highlighted data regions.

Backgrounds

White and Cube White for nearly all contexts. Dark surfaces (Darkest, Navy) reserved only for hero sections, landing page headers, and keynote-style moments. Product UI and documentation always use light surfaces.

Avoid

Heavy dark card grids. Multiple saturated brand colors placed side-by-side at equal weight. Clip art, robot imagery, generic SaaS isometric art, or anything that trivializes the complexity of finance.

08 Iconography

Icon Design Principles

Icons should feel precise, functional, and consistent with the glass-panel design language. Utility-first, never decorative.

Style

Outlined (1.5px stroke) for UI; filled for navigation and emphasis. Rounded corners with 2px radius. Consistent 24x24px grid with 2px padding.

Color

Default: Gray 600 inactive, Gray 800 active. New Blue for selected. Deep Purple exclusively for AI icons. Green OG for success. Burnt Amber for warnings.

Sizing

Standard: 24px (UI), 20px (compact/table), 32px (feature callout), 48px (marketing hero). Always size in 4px increments.

Stroke weight

1.5px for standard 24px icons. Scale proportionally: 1px at 16-20px, 2px at 32px+. Never hairline at 24px.

Library

Preferred: Lucide or Phosphor (outline variant). Both provide geometric, consistent foundations aligned with Cube AI's design. Avoid mixing icon sets.

Icon Color Mapping

Default / inactive	`Gray 600 (#677489)`
Active / selected	`New Blue (#12264D)`
AI / intelligence	`Deep Purple (#5547A5)`
Success / positive	`Green OG (#219E66)`
Warning / attention	`Burnt Amber (#D4802A)`
Destructive / error	`Suggest #E53E3E (not in core palette)`
On dark backgrounds	`White or Light Green (#70CF98)`

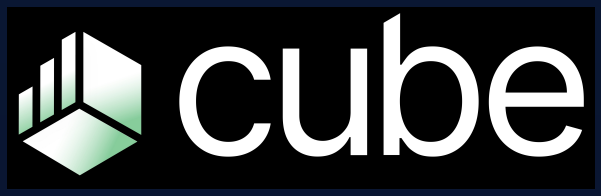

Do's & Don'ts

DO

- Use consistent stroke weight across an icon set
- Optically align icons within their bounding box
- Pair icons with text labels in navigation
- Use filled variants for active/selected states

DON'T

- Mix outlined and filled icons in the same context
- Use icons as the sole indicator of meaning
- Apply gradients or shadows to individual icons
- Stretch, rotate, or distort icons from originals

The Agentic Finance Layer

Decision-ready data, everywhere you work.
